Auto logbook SA

Route Template Guide

1. Download the correct template.

Choose the template that matches your travel type.
Sales Representative Template
For users who visit multiple clients, stores, or locations during the day.
Business Travel Template
For general business travel between offices, meetings, or appointments.

Do not change the template structure.
Do not: Rename columns

- Delete columns
- Move columns

Simply fill in the rows with the locations you visit.

2. Enter the locations you visit

Example:

-
- Factory Parow Cape Town
- Makro Montague Gardens Cape Town
- Eskom Substation Bellville Cape Town

Be specific so the system can find the correct address.

3. The system finds the full address automatically

Auto Logbook SA uses location names to retrieve:

- Street address
- Suburb
- City
- Coordinates

You do not need to enter addresses manually.

4. Auto Logbook SA generates the routes

Once your template is uploaded, the system automatically:

- connects the locations
- calculates distances
- builds the trips
- generates a SARS-ready logbook

You do not need to calculate routes yourself.

The Single Most Important Instruction

Enter locations the same way you would search for them in Google Maps.

Example:

Good

- Giant Hyper Cape Gate
- Makro Montague Gardens Cape Town
- Eskom Substation Bellville Cape Town

Bad

- Giant Hyper
- Makro
- Client
- Store

Because vague names will produce wrong geocoding.

Tip: Enter locations the same way you would search for them in Google Maps.
